Attachments: [CDF Performance Standards for FS 2182010.pdf](#)

Bob

EPA has prepared the attached performance standards to guide the LWG 's development and evaluation of CDF alternatives in the feasibility study. As noted in the cover letter, these standards draw heavily from the performance standards that have been developed and refined as part of the design of the Terminal 4 CDF. As such, they are more comprehensive than the guidance EPA has previously provided for evaluation of caps in the FS. Also as noted, EPA is open to the LWG's evaluation of alternative designs and performance standards in the FS for comparison with alternatives that would comply with the attached standards.

Please let us know if you any questions about the letter or use of these standards.

thanks
Chip
